

Excerpt from Annual Report of the Maine State College: Agricultural Experiment Station Orono, Maine, 1892As before stated, many of these results were put into the desired form by the stations making the experiments, but considerably more than half of them were worked up in this office from the original data. Moreover, a large part of the exhibit itself has been prepared here. All of this required my personal attention. I make the above statements as an explanation why that line of experimental work in which I am immediately interested has been to some extent neglected. Inspection of Fertilizers.As in previous years, the time of the station force has in part been devoted to the inspection of fertilizers. There is a fair prospect that this will not again be done at the expense of the funds supplied by the United States Government. It now appears probable that the Legislature soon to meet will be asked to enact a law which will provide for the expense of this inspection either by direct appropriation from the State, or by requiring a license fee from fertilizer manufacturers doing business in the State. The movement in this direction has the approval of members of the Board of Agriculture and of others who understand the exigencies of the case. Work In Plant Nutrition.Through you I desire to urge upon the attention of the Board of Trustees a proposed enlargement of our work in plant nutrition. Since the establishment of the Experiment Station under the provisions of the Hatch Act. the experiments and investigations in plant feeding have been under the immediate charge of Prof. Balentine. He has attempted to reach beneficial results through field experiments on the College Farm, through experiments conducted by farmers in different parts of the State, and through more or less experimentation in pots with a view to a more exact work than can be done in the field.It is very evident and has been for some time that not only are the errors of field experimentation very large, but that the usefulness of this method of work is limited to the testing of theories as to the correct methods of maintaining fertility. An exact study of the fact and principles of plant nutrition must be accomplished by some other method.About the PublisherForgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.comThis book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
