

This design manual contains information that provides design guidance for structures of various types to resist blast loadings. It is supplementary to NAVFAC P-397 and is intended to consolidate and simplify various sources of design criteria which cover the structural elements encountered in blast resistant design. The various effects associated with chemical (HE) explosion, the design of structural steel elements, reinforced concrete frame, and other structural elements, such as reinforced masonry and glass, are described. Design and analysis of blast doors and foundations and the description and availability of certain computer programs are also provided.

The nature of blast-induced loads varies from other general loads for which the structures are commonly analyzed and designed. Blast-resistant design. Our highly durable blast resistant buildings and explosion proof structures are manufactured to all relevant standards and are thoroughly tested to ensure. PDF The strategy for dealing with the blast-induced threats against a structure requires attention from planning and design stages.

A Fortune company needed a massive blast-resistant structure in compliance with API RP The answer for this project was a Max structure .

For temporary break areas or temporary space on industrial job sites, there's no substitute for a MAX blast resistant tent structure. The best blast shelter.
