

The report reviews the major Mercury and then Gemini precursors for the Apollo mission program and its development and mission sequence. But, very importantly, it describes the major and often complex deliberations that encouraged inputs from the broad range of informed internal Agency individuals in order to arrive at the resulting actions taken; it recognizes differences among their various views, including even sensitivities within the leadership of the Agency, and it acknowledges NASAs relationships with the President and key executive branch personnel, as well as the very important and often complex relationships with members of Congress. The process of writing this book was searching and comprehensive. The achievement of the worlds first manned lunar landings, after the earlier Mercury and Gemini programs played catch-up to match the Soviet Unions advanced position, clearly established the United States preeminence in space. Early in the book, Bob describes an extended meeting in the White House in which the Presidents views and those of Mr. Webb were seriously discussed. Bob tells how, through Apollos lunar landing, NASA clearly met both President Kennedys goal to overcome the Soviets leadership image and James Webbs goal to use Apollo as a major part of his program to demonstrate U.S. technological preeminence. Monographs in Aerospace History Number 37. NASA SP-2005-4537

First Place, Practice Makes Perfect Advanced ESL Reading and Comprehension (EBOOK), Finding Joy Street, Album Covers: Philadelphia Music Makers Gamble and Huff: Legendary Rhythm & Blues Songwriters, The Vile Files, The Scientific Basis for the Care of the Critically Ill, Paule im Siebenprinzenwald (German Edition), Vampires of Great Britain, VLSI Implementation of Neuromorphic Learning Networks, A History of Science and Technology; Nature Obeyed and Conquered: 1, Ancient times to the seventeenth century; 2, the eighteenth and nineteenth centuries.,
