

What will be the impact on forests of future economic development, globalized trade and increases in the world's population? The 2009 edition of the biennial State of the World's Forests looks forward, with the theme Society, forests and forestry: adapting for the future. Part 1 summarizes the outlook for forests and forestry in each region, based on FAO's periodic regional forest-sector outlook studies. Past trends and projected demographic, economic, institutional and technological changes are examined to outline the scenario for 2030. Part 2 considers how forestry will have to adapt for the future, focusing on: the global outlook for wood products demand; mechanisms for meeting the demand for environmental services of forests; changes in forest-sector institutions; and developments in science and technology. A useful reference for policy-makers, foresters, environmentalists, academics and all readers concerned with the major issues affecting the forest sector today. Also published in Arabic, Chinese, English, French, and Spanish.
